

CLAIMS

1. A cement admixture comprising three components of a copolymer (A), an unsaturated (poly)alkylene glycol ether monomer (a) and a non-polymerizable (poly)alkylene glycol (B) 5 having no alkenyl group at ratios of the unsaturated (poly)alkylene glycol ether monomer (a) to the copolymer (A) in a range of 1 to 100% by mass and the non-polymerizable (poly)alkylene glycol (B) having no alkenyl group to the copolymer (A) in a range of 1 to 50% by mass,

10 wherein the copolymer (A) contains a constituent unit (I) derived from the unsaturated (poly)alkylene glycol ether monomer (a) and a constituent unit (II) derived from a maleic acid monomer (b) at ratios of the constituent unit (I) and the constituent unit (II) in a range of 1% by mass or more, respectively, 15 in the entire constituent units,

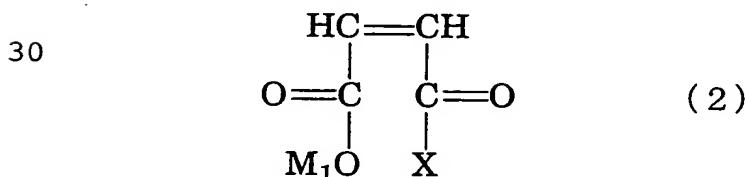

and the unsaturated (poly)alkylene glycol ether monomer (a) is represented by the general formula (1):

(wherein Y represents an alkenyl group containing 2 to 4 carbon 20 atoms, R² represents a hydrogen atom or a hydrocarbon group containing 1 to 30 carbon atoms, R¹O represents one or more species of oxyalkylene groups containing 2 to 18 carbon atoms, and n represents the average molar number of addition of the oxyalkylene groups and is a number of 1 to 500).

25

2. The cement admixture according to Claim 1, wherein the maleic acid monomer (b) is represented by the general formula (2):

(wherein X represents -OM₂ or -Z-(R³O)_qR⁴, M₁ and M₂ may be the 35 same or different and each represents a hydrogen atom, a

monovalent metal, a divalent metal, an ammonium group or an organic ammonium group, -Z- represents -O- or -NH-, R³O represents one or more species of oxyalkylene groups containing 2 to 18 carbon atoms, R⁴ represents a hydrogen atom, an alkyl group containing 1 to 30 carbon atoms, a phenyl group, an aminoalkyl group, an alkylphenyl group or a hydroxyalkyl group (the number of carbon atoms of the alkyl groups in the aminoalkyl group, the alkylphenyl group and the hydroxyalkyl group is 1 to 30), q represents the average molar number of addition of the oxyalkylene groups and is a number of 0 to 500, provided that the compound includes those having acid anhydride group (-CO-O-CO-) formed by bond of oxygen bonded to M₁ with carbon bonded to X, in which M₁ and X do not exit).

15 3. The cement admixture according to Claim 1,
 wherein the oxyalkylene group composing the
 non-polymerizable (poly)alkylene glycol (B) having no alkenyl
 group is one or more species of oxyalkylene groups containing
 2 to 18 carbon atoms, and the terminal group of the
20 non-polymerizable (poly)alkylene glycol (B) having no alkenyl
 group is a hydrogen atom, an alkyl group or an (alkyl)phenyl
 group containing 1 to 30 carbon atoms.

25 4. The cement admixture according to Claim 2,
 wherein the oxyalkylene group composing the
 non-polymerizable (poly)alkylene glycol (B) having no alkenyl
 group is one or more species of oxyalkylene groups containing
 2 to 18 carbon atoms, and the terminal group of the
 non-polymerizable (poly)alkylene glycol (B) having no alkenyl
30 group is a hydrogen atom, an alkyl group or an (alkyl)phenyl
 group containing 1 to 30 carbon atoms.

35 5. The cement admixture according to Claim 1,
 further comprising at least one additive selected from
 the group consisting of (C1) a setting accelerator, (C2) at least

one compound selected from oxycarboxylic acid, its salt, saccharide, and sugar alcohol, and (C3) a sulfonic acid type dispersant containing a sulfonic acid group in the molecule.

5 6. The cement admixture according to Claim 2,
 further comprising at least one additive selected from
 the group consisting of (C1) a setting accelerator, (C2) at least
 one compound selected from oxycarboxylic acid, its salt,
 saccharide, and sugar alcohol, and (C3) a sulfonic acid type
10 dispersant containing a sulfonic acid group in the molecule.

7. The cement admixture according to Claim 3,
further comprising at least one additive selected from the group
consisting of (C1) a setting accelerator, (C2) at least one
15 compound selected from oxycarboxylic acid, its salt, saccharide,
 and sugar alcohol, and (C3) a sulfonic acid type dispersant
 containing a sulfonic acid group in the molecule.

8. The cement admixture according to Claim 4,
20 further comprising at least one additive selected from the group
 consisting of (C1) a setting accelerator, (C2) at least one
 compound selected from oxycarboxylic acid, its salt, saccharide,
 and sugar alcohol, and (C3) a sulfonic acid type dispersant
 containing a sulfonic acid group in the molecule.

25 9. The cement admixture according to Claim 5,
 wherein the sulfonic acid type dispersant (C3) containing
 a sulfonic acid group in the molecule is a compound having an
 aromatic group.

30 10. The cement admixture according to Claim 6,
 wherein the sulfonic acid type dispersant (C3) containing
 a sulfonic acid group in the molecule is a compound having an
 aromatic group.

11. The cement admixture according to Claim 7,
wherein the sulfonic acid type dispersant (C3) containing
a sulfonic acid group in the molecule is a compound having an
aromatic group.

5

12. The cement admixture according to Claim 8,
wherein the sulfonic acid type dispersant (C3) containing
a sulfonic acid group in the molecule is a compound having an
aromatic group.

10

13. A cement composition comprising the cement admixture
according to Claim 1, cement and water.

15

14. A cement composition comprising the cement admixture
according to Claim 2, cement and water.

15. A method for producing a cement hardened product,
comprising:

20 executing a cement composition comprising the cement
admixture according to Claim 1 containing a setting accelerator
(C1), cement and water; and

hardening the cement composition at a temperature
condition of 30°C or less.

25

16. A method for producing a cement hardened product,
comprising:

executing a cement composition comprising the cement
admixture according to Claim 2 containing a setting accelerator
(C1), cement and water; and

30

hardening the cement composition at a temperature
condition of 30°C or less.

17. A method for executing a cement composition
comprising:

35

executing the cement composition comprising the cement

admixture according to Claim 1 containing at least one compound (C2) selected from oxycarboxylic acid, its salt, saccharide, and sugar alcohol, cement and water at a temperature condition of 20°C or more.

5

18. A method for executing a cement composition comprising:

executing the cement composition comprising the cement admixture according to Claim 2 containing at least one compound (C2) selected from oxycarboxylic acid, its salt, saccharide, and sugar alcohol, cement and water at a temperature condition of 20°C or more.
